Notification of Rejection(s) and/or Objection(s)

#	Claim(s)	Reference(s) (if applicable)	Rejection Statutory Basis	Brief Explanation of Rejection
	1, 4, 6	A	103(a)	Reference A discloses attaching a PDA to a laptop (Paras. 11-16, 19-21) for displaying email or calendar information (Para. 18), such that a mechanism determines what to send to the laptop screen vs. the PDA screen (Paras. 24-27, 31-33). Reference A also teaches receiving input at a laptop (cont.)
	1, 23	A, B	103(a)	Reference B teaches integrating a laptop and PDA (Paras. 23-26) such that video displays, synchronizations, and shared inputs are coordinated (Paras. 27-31, 34-36), wherein the PDA is attached by a hinge for optional simultaneous viewing side by side. (cont.)
	1, 21, 22	A, C	103(a)	Reference C teaches a PDA attached via a rotatable hinge to the top of a laptop (Fig. 6; col. 3, line 50 - col. 4, line 45; PDA rotates along base-lid hinge as laptop opens), wherein synchronization is performed (coordinated memory) and further wherein (cont.)
	2, 5	A-D	103(a)	Particular data window is non-functional data. Reference D teaches the usage of IM and media windows (Paras. 81, 110, 191). Functionality is obvious to replace for one of ordinary skill in the art (Paras. 9-13).
	3	A-C, E	103(a)	Similar analysis to reference D. Reference E adds calculator windows (col. 3, lines 15-25) and similar motivation (col. 1, lines 40-65).

Expanded Discussion/Commentary

		from the input device of the PDA (Paras. 31-33), and synchronization of information (Para. 18). Reference A also teaches that "in the closed position the screen of the personal digital assistant is not viewable simultaneously with the computer display (Fig. 1, neither screen visible in closed position)."
		Reference B is somewhat unclear in how to interpret (Para. 14), but is reasonably interpreted in light of Para. 34. Construing the interpretation in the best possible light for the applicant, Para. 34 still teaches a direct coupling side-by-side view and hinge, allowing for a potential rotating hinge connection via another art.
		the laptop's keyboard controls the PDA and power supplies (Fig. 5; col. 4, line 45 - col. 5, line 45).
